THE EPWORTH SLEEPINESS SCALE

How likely are you to doze off or fall asleep in the following situations, in contrast to just feeling tired? This refers to your usual way of life in recent times. Even if you have not done some of these things recently, try to work out how they would have affected you. Use the following scale to choose the most appropriate number for each situation:

- 0= would never doze
- 1= slight chance of dozing
- 2= moderate chance of dozing
- 3= high chance of dozing

Situation

Chance

Sitting and reading

Watching television

Sitting, inactive, in a public place

As a passenger in a car for 1 hour

Lying down in the afternoon

Sitting and talking to someone

Sitting quietly after a lunch without alcohol

In a car, while stopped for a few minutes in traffic

Total Score:

A score > 10 suggests excessive sleepiness
